

## Strange broadcast interrupts Lego Derby and Sets August date for Pack 4031

By: Phil Indablang

Another peaceful Pack meeting interrupted by none other than Godrick Auvem with what seemed to be a transmission from the future. It seems he has finally set a date for whatever his dastardly plans may entail. August 24, 2024. Even the numeric value of the dates seems riddled with significance. 8/24/2024 Divisible, multiplic-atable, plus-able... the numbers seem intertwined with possibilities.

As the timeline moves ever closer it seems we should examine the other members ensnared in this event.

World renowned adventurer Danny Jones has been drawn into this fold.

Most known for his work with the rabid fire breathing bearded dragon

from the far distant islands of *Caliente-Diablo*. Danny went

**Danny Jones**

in search of the beast known for seared and charred marks left in its path as well as the profuse foaming of the mouth. Local inhabitants of the island warned of the monster *Skeet-tel-es*. As Mr. Jones approached with steel in his gut, he found *Skeet-tel-es* just had severe acid-reflux, the cause of the burn and char marks, and the foaming was caused by an over-dose of antacids. Mr. Jones started a literacy program for the local lizard population so they could be sure to read instructions for proper dosing of heart burn relief medications going forward. His adventures have led him all over the world to work with reptile kind in their pursuit of education.

I reached out to Danny's agent for comment on the fact that he has been named and drawn into these happenings. I was not able to get an official Danny Jones comment but was only asked how much I was willing to pay for an official comment. I said this was for a news paper article. This led to a rant from the agent regarding time and if Mr. Jones were to lend out free comments all the time there wouldn't be any money left over for... somehow I accidentally disconnected the phone at this point.

Close colleague and personal friend of mine is Spec Runner. Coming onto the scene with his

**Specs Runner**

photo-autobiography *Specs on A Specs: Photojournalist's Story with a Feable-Minded Word-Smith*, details the times that he and I have spent together chronicling the goings-on of the world around Pulaski, WI. If there is one thing I know about Specs, you never know what side he will pop up on.

How will all of this play out? The lives, of so many. Dr. Auvem, Dr. Thunder, Danny Jones, Spec Runner, me, Phil Indablang, and the members of Pack 4031. Will the videos have reason to them. Will the cause of the dinosaur foot prints that were found last August finally have an answer? It seems all will be revealed in August of this year.
